

MILESTONE 1: CONCEPT DOCUMENT

1. App Name: VocabBoost

2. Description:

VocabBoost is a mobile application designed to help users improve their vocabulary in a fun and organized way. The app allows users to learn new words, review definitions, and practice through quizzes. It also tracks progress and helps users remember words over time using repetition.

3. Target Audience:

- Students learning English
- People preparing for exams (TOEFL, IELTS, etc)
- Anyone who wants to improve their vocabulary
- Non-native English speakers

4. How the App will be used

- The user opens the app and creates profile.
- The user selects a vocabulary levels (beginner, intermediate, advanced)
- The app displays a list of vocabulary words.
- The user studies words with definitions and examples.
- The user takes quizzes to test understanding.
- The app stores learned words in a list.
- The app repeats difficult words for better memory.
- The user tracks progress and scores over time.

5. Example Scenario

Sarah is a student preparing for the IELTS exam. She opens VocabBoost and selects the intermediate level. The app shows her 10 new words with meanings and examples. After studying, she takes a quiz. She gets 7 out of 10 correct. The app saves her results and repeats the difficult words the next day to help her improve.

6. Key Features

- User input (answer quiz questions, choose levels)
- Decision making (correct vs incorrect answers)
- Iteration (repeat words and quizzes)
- Arrays (store vocabulary words and user progress)
- GUI interface (word list screen, quiz screen, progress screen)
